# Introduction

- What is Landsat ?

The screenshot shows the homepage of the USGS Landsat Missions website. At the top, there is a navigation bar with back and forward buttons, a search bar containing the URL <http://landsat.usgs.gov/>, and a magnifying glass icon. Below the navigation bar is the USGS logo with the tagline "science for a changing world". To the right of the logo is a photograph of a satellite in space. The main content area has a dark background with white text. On the left, there are three buttons: "Home" (highlighted in orange), "About Landsat" (in blue), "Gallery" (in blue), and "Science" (in blue). On the right, there is a button labeled "Mission Headlines" (highlighted in orange) and a large text box containing a message about connectivity issues on October 20, 2015, and October 22, 2015.

**Landsat Missions**

**Mission Headlines**

**About Landsat**

**Gallery**

**Science**

**October 20, 2015 – Possible Connectivity Issues Thursday, Oct 22, 2015**

This site may have intermittent access Thursday October 22, 2015 between 6 pm and 9 pm CDT during network upgrades. We apologize for any inconvenience this may cause.

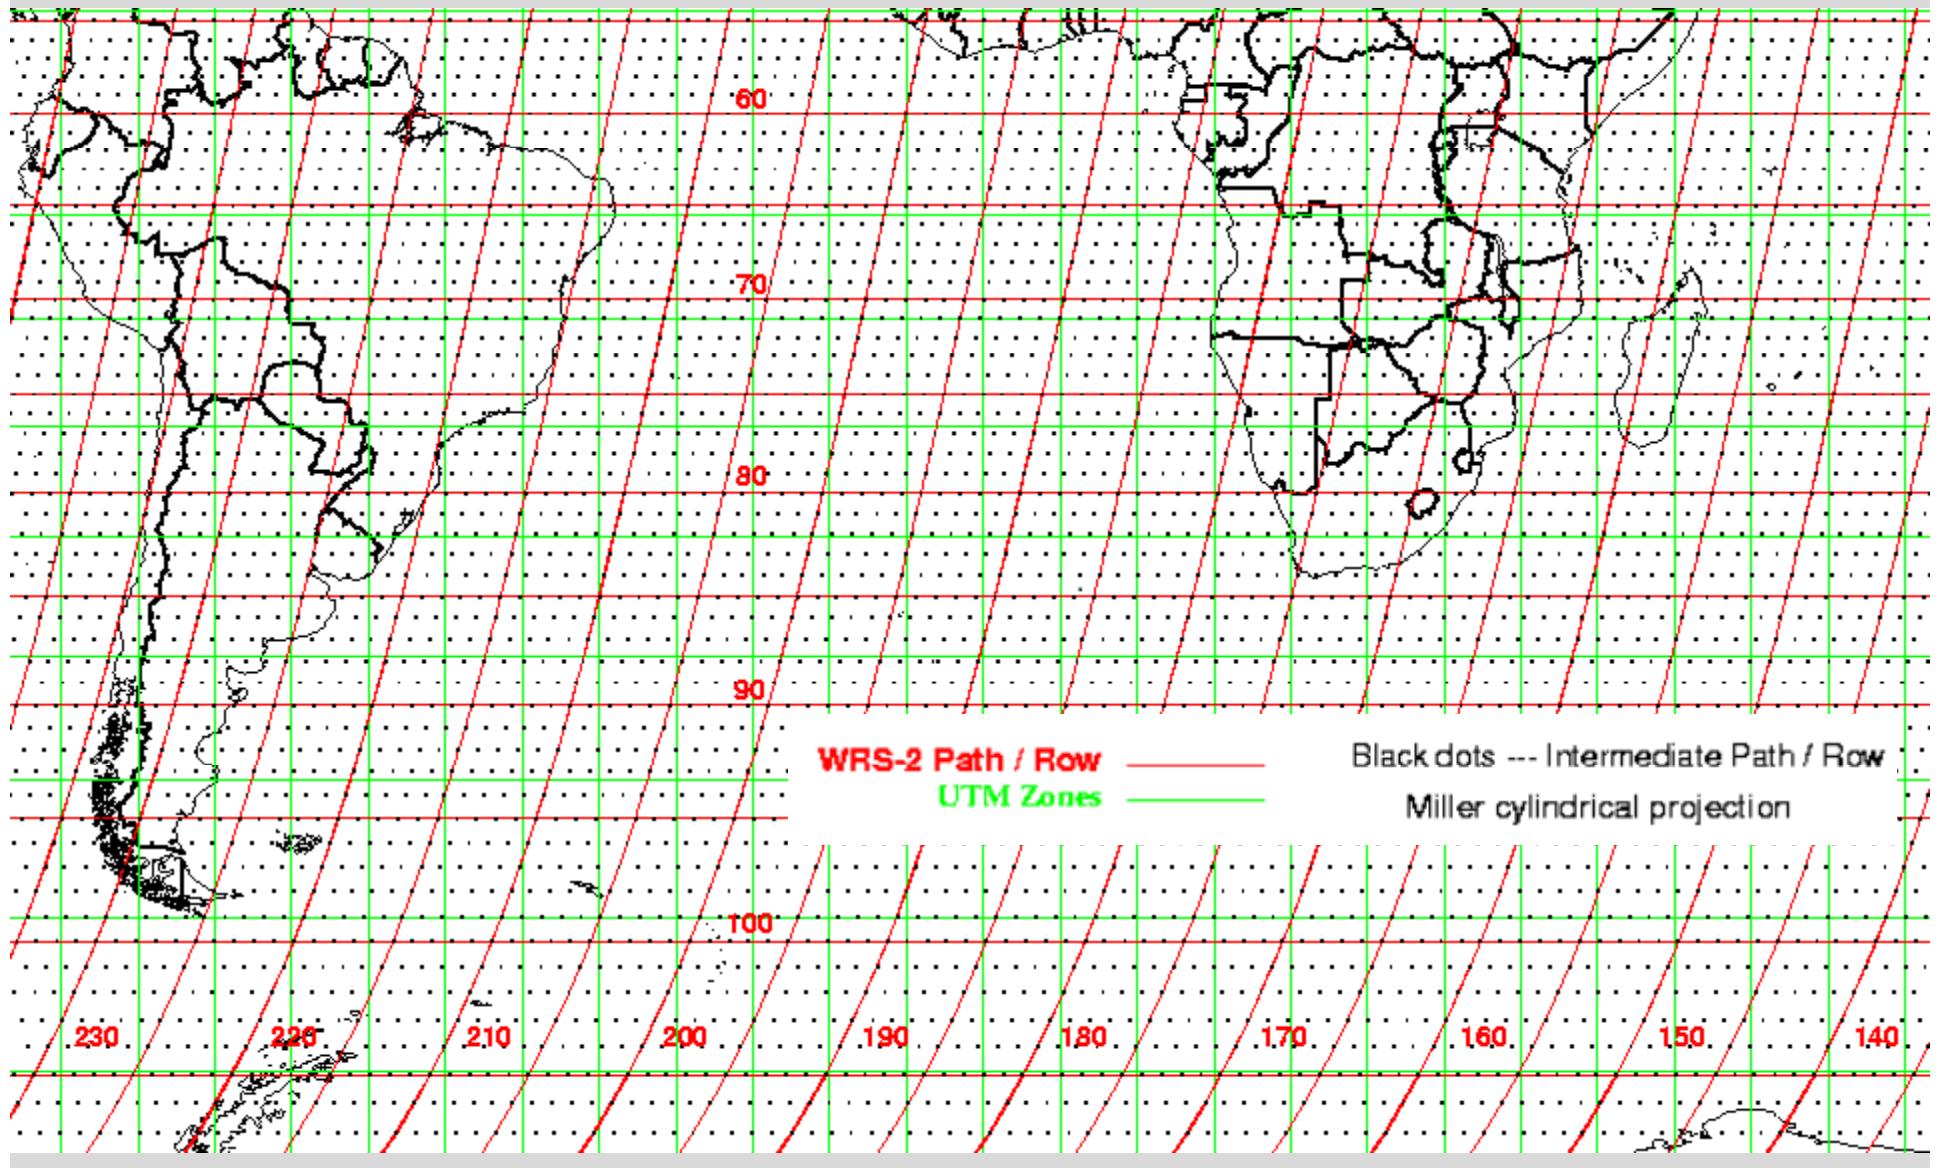

# Introduction

- Where can I download?

The screenshot shows the USGS EarthExplorer search interface. At the top is the USGS logo and the text "science for a changing world". Below it is the "EarthExplorer" header. A navigation bar includes "Home" and "3 New System Messages". The main area is titled "1. Enter Search Criteria" with instructions: "To narrow your search area: type in an address or place name, enter coordinates or click the map to define your search area (for advanced map tools, view the [help documentation](#)), and/or choose a date range." It features four tabs: "Address/Place" (selected), "Path/Row", "Feature", and "Circle". Below these are two input fields: one for "Address/Place" and another for "Coordinates" with options "Degree/Minute/Second" and "Decimal". A status message at the bottom says "① No coordinates selected". To the right is a "Search Criteria Summary" map of the Kanto and Tohoku regions of Japan, showing prefectures like Niigata, Fukushima, Tochigi, Ibaraki, Gunma, Saitama, Tokyo, Yamanashi, and Kanagawa, along with major cities like Nagano, Iwaki, and Fuji.

The screenshot shows the "Get Data" section of the USGS website. It includes three main links: "View and Get Color Images - [LandsatLook Viewer](#)", "Browse and Download Data - [GloVis](#)", and "Search and Bulk-Download Data - [EarthExplorer](#)". The background of this section is a satellite image of a landscape.

# Seen Selection – Path and Row

# Seen Selection

The image shows the Google Earth interface. On the left, there is a sidebar with various controls and lists:

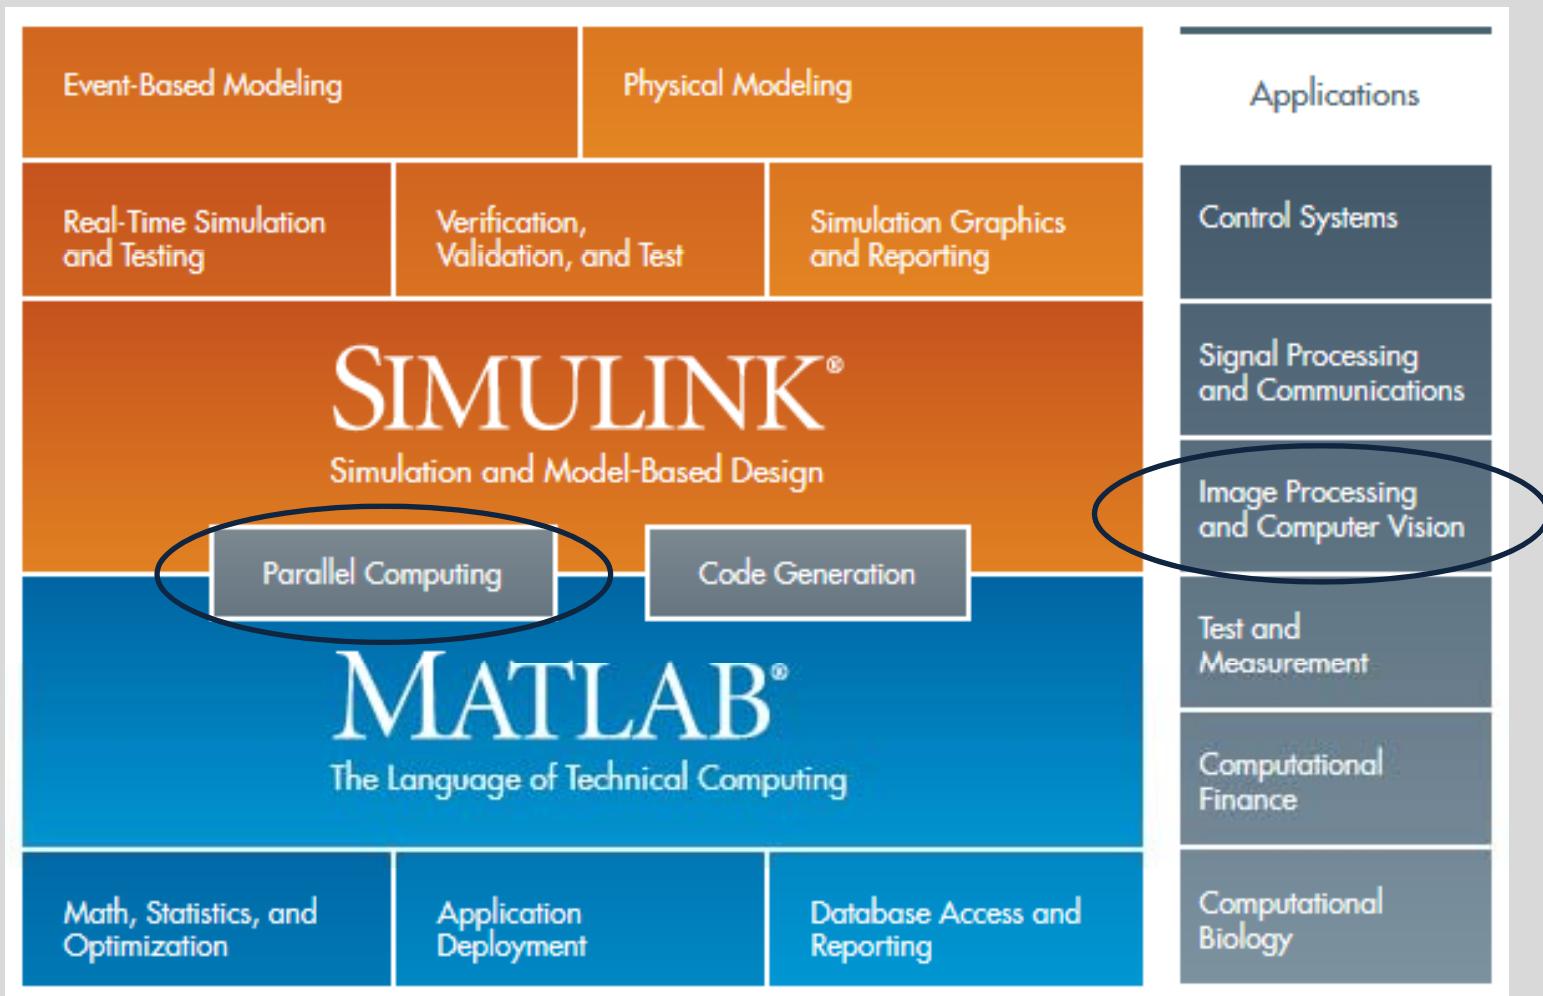

- Search:** A search bar with placeholder text "ex: Pizza near Clayville, NY" and a "Search" button. Below it are "Get Directions" and "History" links.
- Places:** A list of saved locations:
  - My Places
  - Sightseeing Tour
    - Make sure 3D Buildings layer is checked
    - Riyadh\_Kindom\_Sq
    - testN
    - testS
  - Temporary Places
  - WRScornerpoints descendin...
- Layers:** A list of layers:
  - Primary Database
  - Voyager
    - Go on Safari
    - Edition 2
    - Download
  - Borders and Labels
  - Places
  - Photos
  - Roads
  - 3D Buildings
  - Ocean
  - Weather
  - Gallery
  - Global Awareness
  - More

At the bottom of the sidebar, there are buttons for "Tour Guide" and "Earth Gallery >".

The main area displays a 3D globe with a yellow selection mesh overlaid on the landmasses, particularly in North America and Europe. The mesh consists of numerous small squares forming a grid pattern. In the bottom right corner of the globe, there is a copyright notice: "US Dept of State - Geography © 2015 Google © 2009 GeoBasis DEM/BKG Data SIO NOAA U.S. Navy NGA GEBCO". At the very bottom of the screen, the coordinates "29°35'22.79" N 143°23'23.58" E eye alt 9808.10 km are displayed.

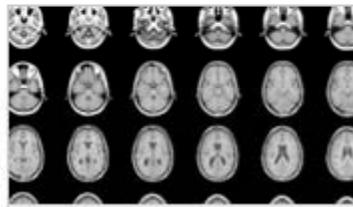

# Matlab

- Components

# Matlab – Image processing toolbox

## Capabilities

### Exploration and Discovery

Use functions and apps to acquire, visualize, analyze, and process images in many data types.

[» Learn more](#)

### Image Enhancement

Increase the signal-to-noise ratio and accentuate image features by modifying the colors or intensities of an image.

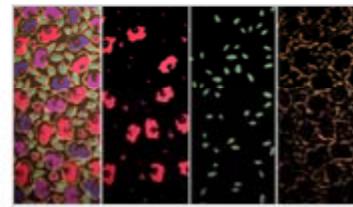

[» Learn more](#)

### Image Analysis

Perform image analysis by extracting meaningful information from images, such as finding shapes, counting objects, identifying colors, or measuring object properties.

[» Learn more](#)

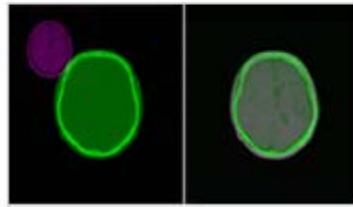

### Image Segmentation

Explore different approaches to image segmentation, including progressive methods, automatic thresholding, edge-based methods, and morphology-based methods.

[» Learn more](#)

 [Watch video 5:11](#)

### Image Registration and Geometric Transformations

Perform image registration, which is important in remote sensing, medical imaging, and other applications in which images must be aligned to enable quantitative analysis or qualitative comparison.

### Large Image Processing and Performance Acceleration

Work with large images that are difficult to process and display with standard methods.

[» Learn more](#)

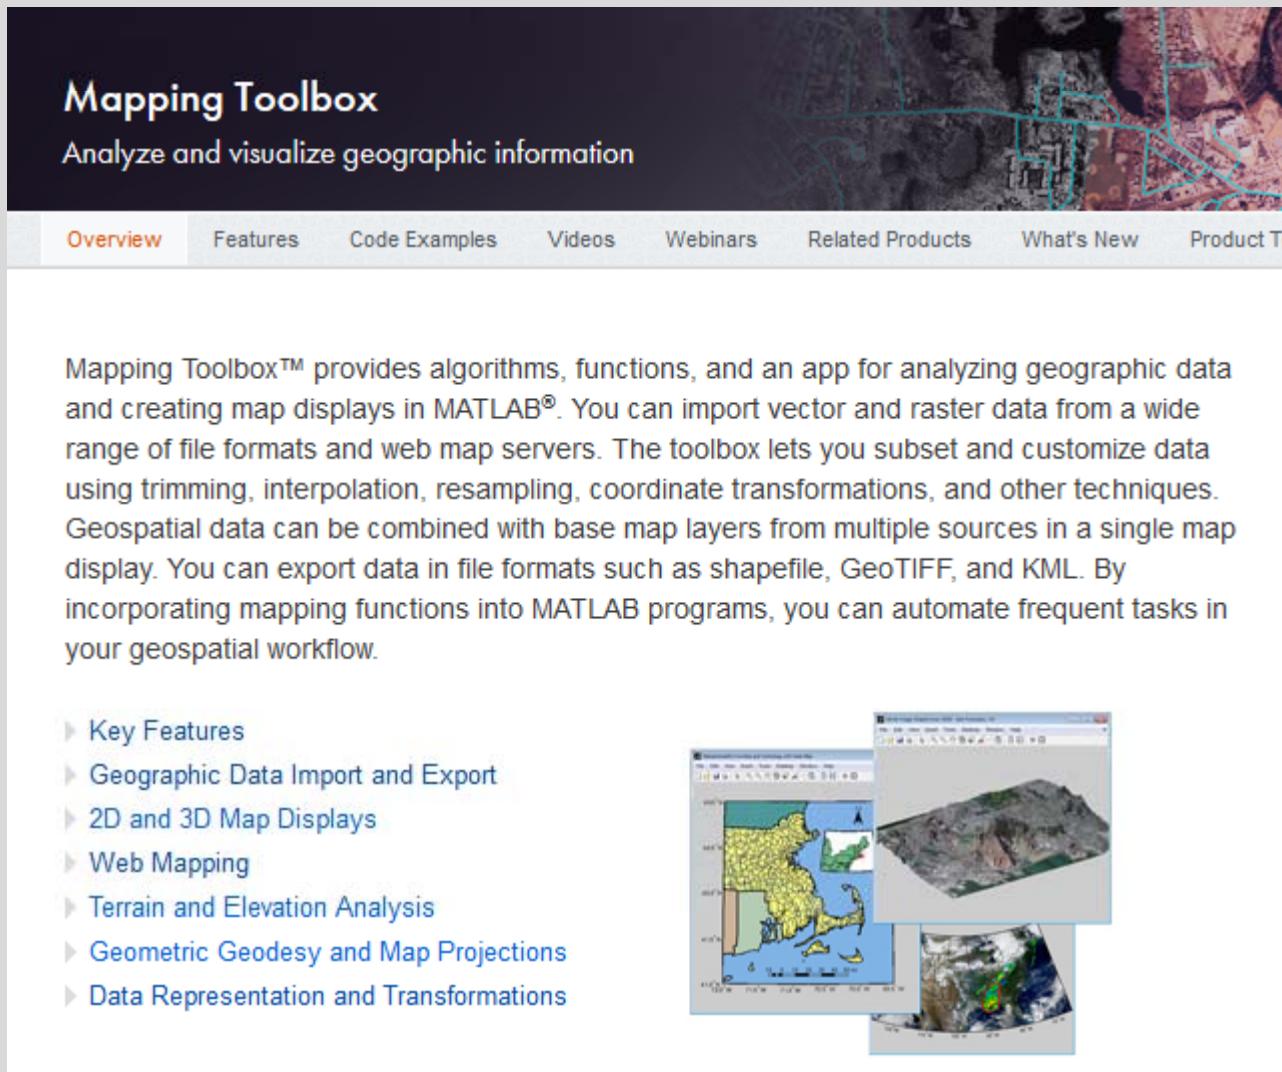

### Target Hardware

Generate C, C++, and HDL code directly from MATLAB by using Image Processing Toolbox with MATLAB Coder, Vision HDL Toolbox, and HDL Coder.

[» Learn more](#)

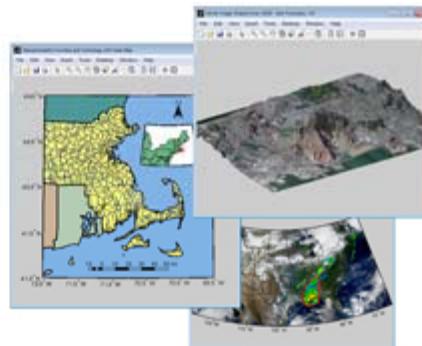

# Matlab – Mapping toolbox

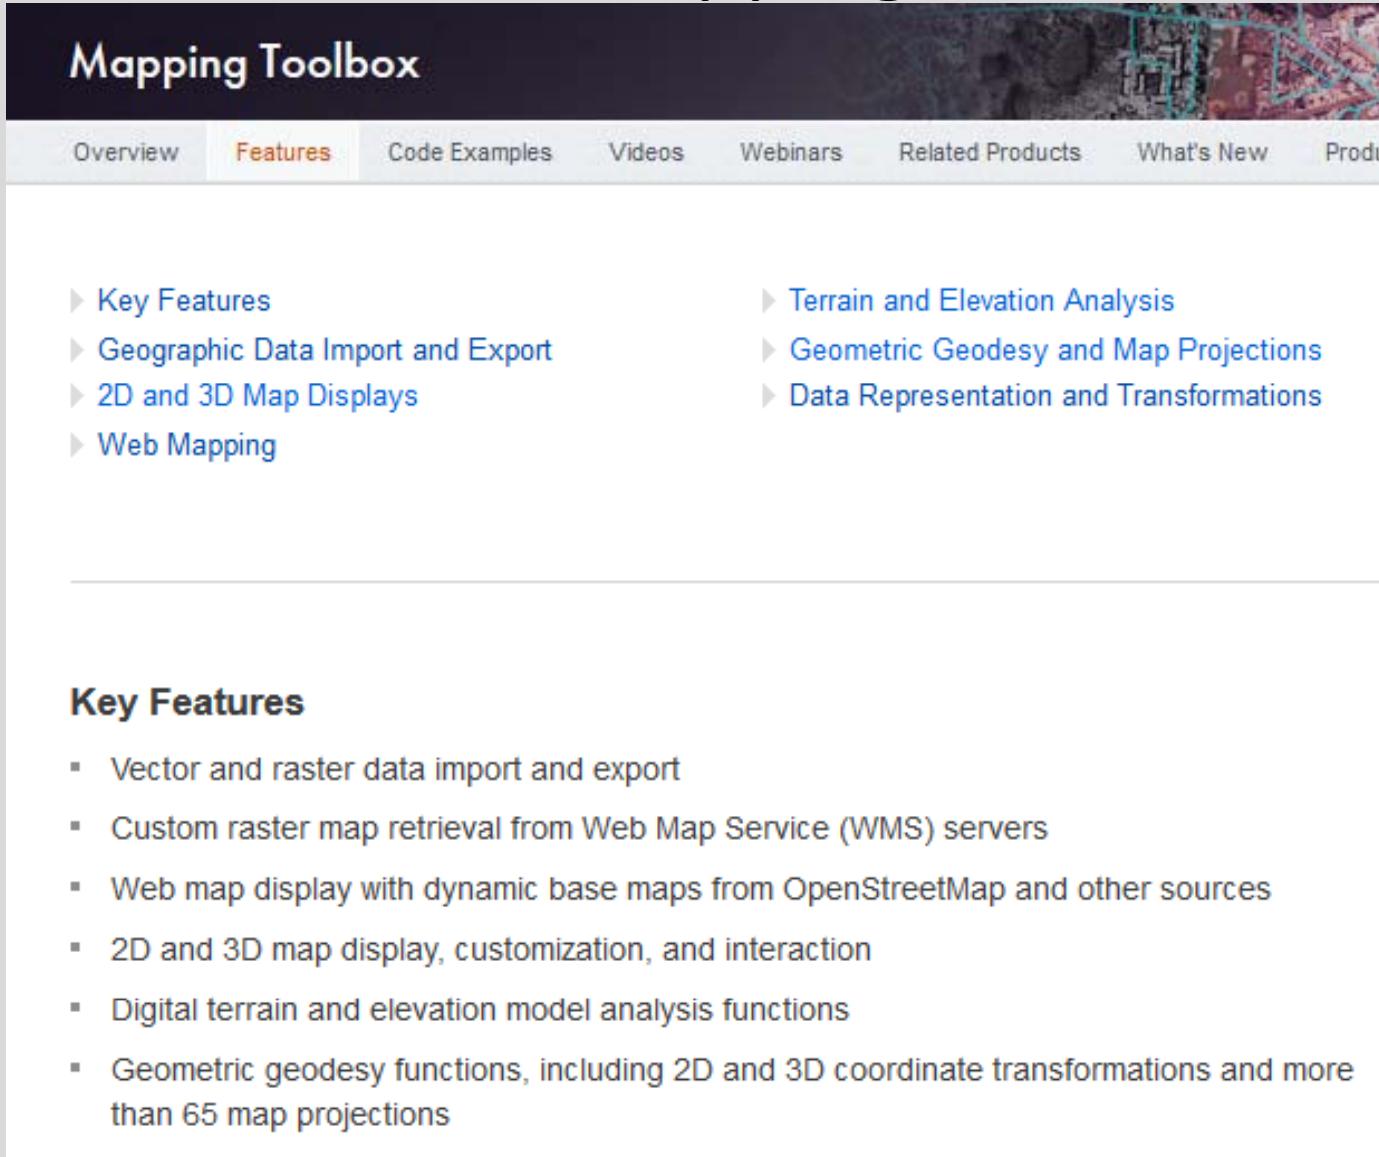

The screenshot shows the Matlab Mapping Toolbox product page. The header features the title "Mapping Toolbox" and the subtitle "Analyze and visualize geographic information". Below the header is a navigation bar with links: Overview (highlighted in orange), Features, Code Examples, Videos, Webinars, Related Products, What's New, and Product Trials. The main content area contains a paragraph describing the toolbox's capabilities, followed by a list of key features and a preview of the software interface.

Mapping Toolbox™ provides algorithms, functions, and an app for analyzing geographic data and creating map displays in MATLAB®. You can import vector and raster data from a wide range of file formats and web map servers. The toolbox lets you subset and customize data using trimming, interpolation, resampling, coordinate transformations, and other techniques. Geospatial data can be combined with base map layers from multiple sources in a single map display. You can export data in file formats such as shapefile, GeoTIFF, and KML. By incorporating mapping functions into MATLAB programs, you can automate frequent tasks in your geospatial workflow.

► Key Features  
► Geographic Data Import and Export  
► 2D and 3D Map Displays  
► Web Mapping  
► Terrain and Elevation Analysis  
► Geometric Geodesy and Map Projections  
► Data Representation and Transformations

# Matlab – Mapping toolbox

A screenshot of the Matlab Mapping Toolbox product page. The header features the title "Mapping Toolbox" in white on a dark background. Below the header is a navigation bar with links: Overview, Features (which is highlighted in orange), Code Examples, Videos, Webinars, Related Products, What's New, and Products. The main content area contains two columns of blue links under the heading "Key Features".

**Key Features**

- ▶ Key Features
- ▶ Geographic Data Import and Export
- ▶ 2D and 3D Map Displays
- ▶ Web Mapping
- ▶ Terrain and Elevation Analysis
- ▶ Geometric Geodesy and Map Projections
- ▶ Data Representation and Transformations

**Key Features**

- Vector and raster data import and export
- Custom raster map retrieval from Web Map Service (WMS) servers
- Web map display with dynamic base maps from OpenStreetMap and other sources
- 2D and 3D map display, customization, and interaction
- Digital terrain and elevation model analysis functions
- Geometric geodesy functions, including 2D and 3D coordinate transformations and more than 65 map projections

# File formats and data products supported by Mapping Toolbox

- Raster file formats, such as GeoTIFF, USGS DEM, DEM, DTED, Arc ASCII Grid, GTOPO30, ETOPO, and worldfile
- Vector file formats, such as ESRI® shapefiles, KML, GPX, VMAP0, and GSHHS
- Selected data products, such as AVHRR and EGM96

Relevant data formats supported by MATLAB include:

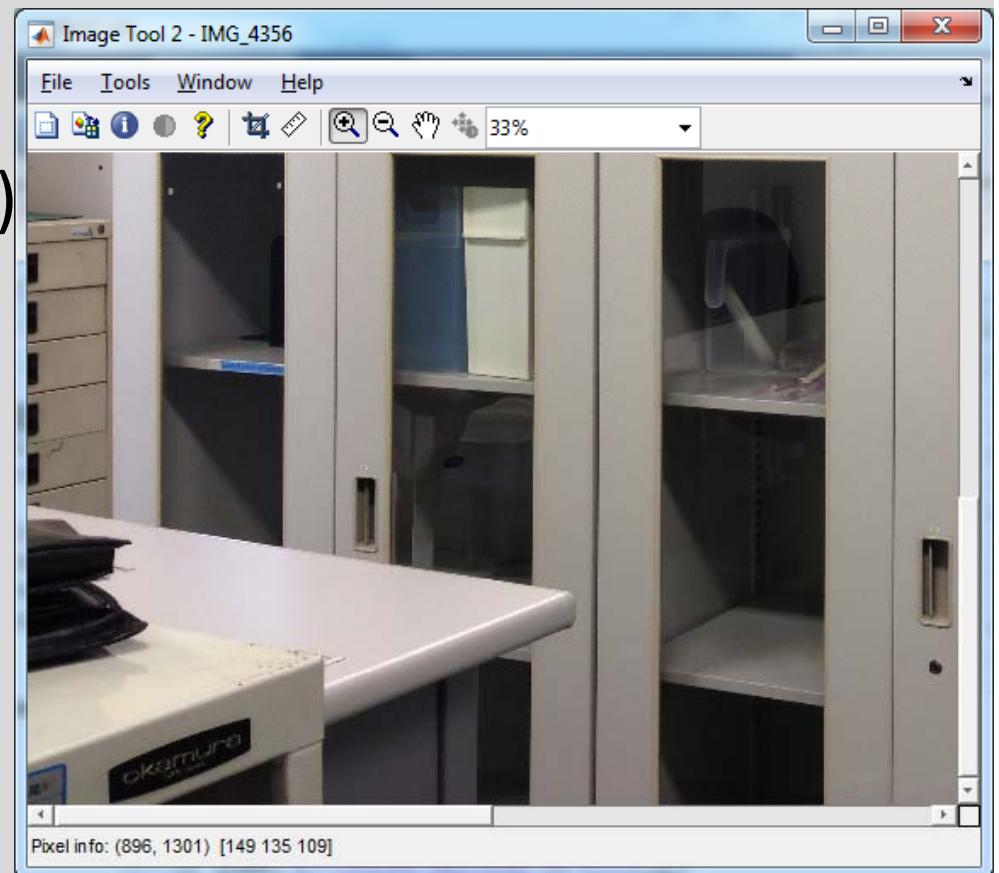

- Image file formats, such as TIFF, JPEG, PNG, and JPEG2000
- Scientific data formats, such as NetCDF, HDF5, HDF4, HDF-EOS, and multiband files (BIP, BIL, BSQ)
- Network data access through OPeNDAP URL address

Relevant image file formats supported by Image Processing Toolbox include:

- NITF and HDR

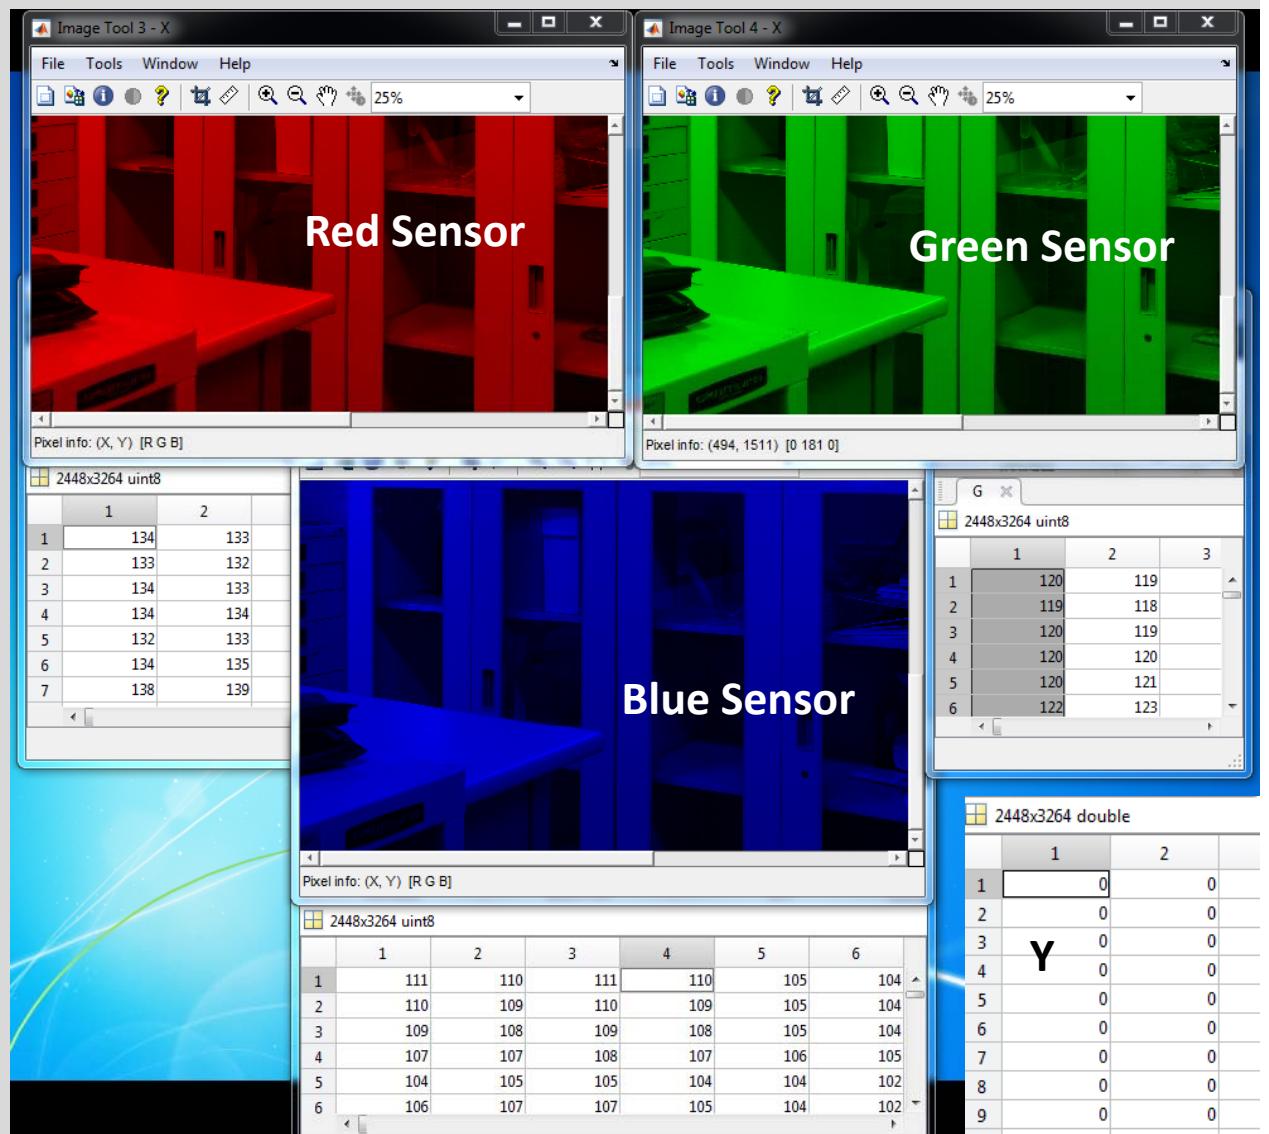

# Read an image with Matlab

- Bands ?
- R, G, B?
- Let's read an image  
`A = imread('img_name')`

# True color image and band separation

- `imread('img_name')`
- `R = A(:,:,1);`
- `G = A(:,:,2);`
- `B = A(:,:,3);`
- `Y = zeros(size(R));`
- `X = cat(3,R,G,B);`
- `imshow(X)`
  
- `Rsum = sum(sum(R));`
  - `1.153476040000000e+09`
- `Gsum = sum(sum(G));`
  - `1.093311338000000e+09`
- `Bsum = sum(sum(B));`
  - `1.037606082000000e+09`

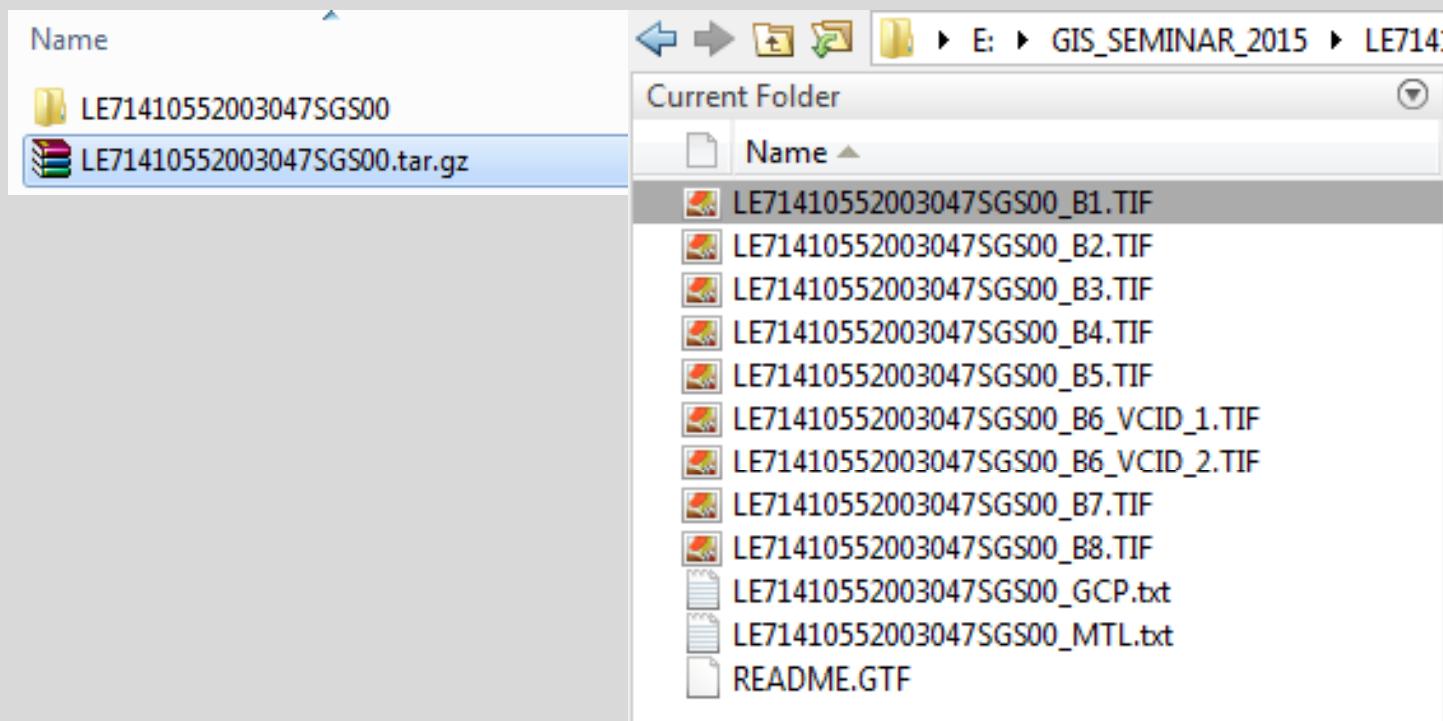

# False Color images

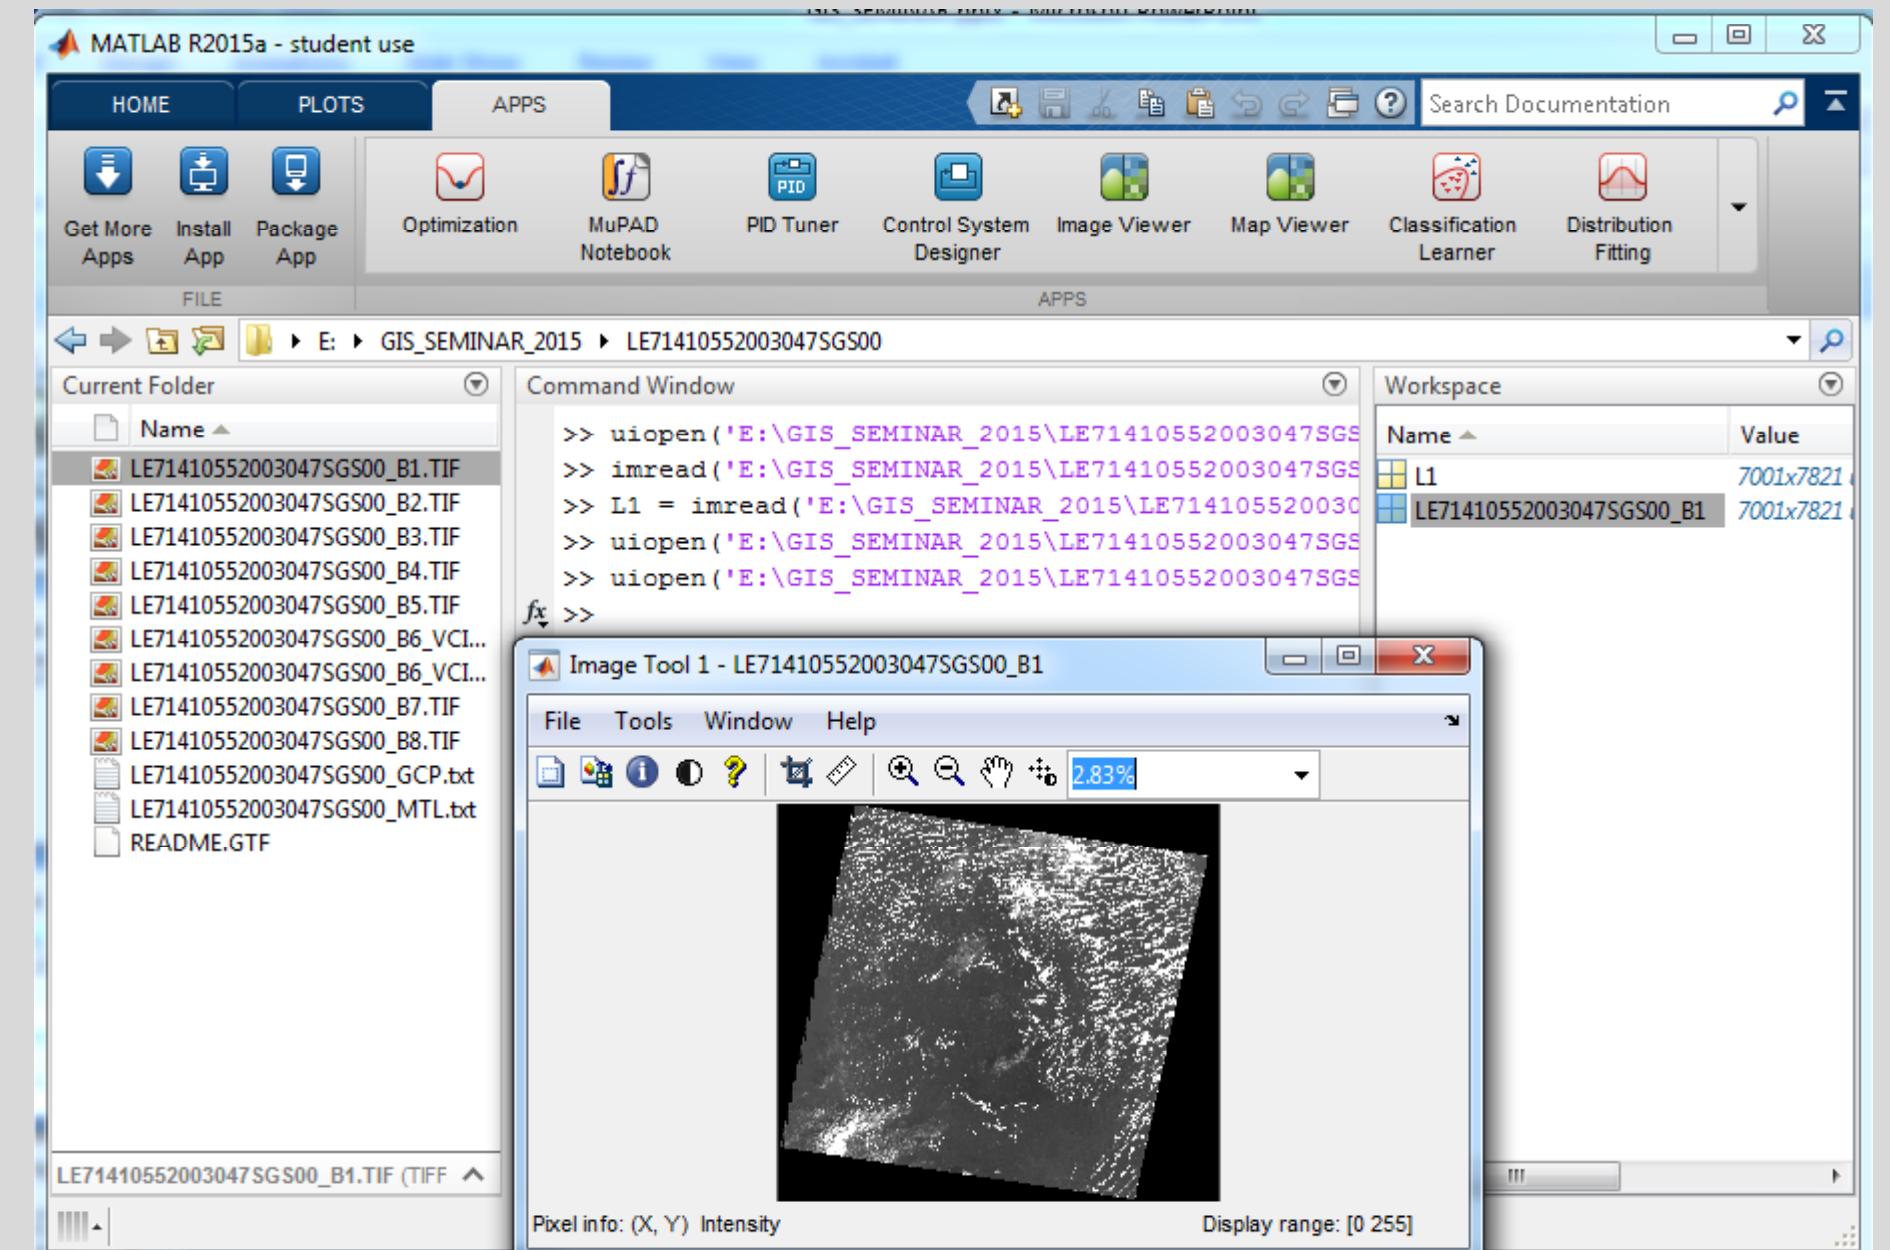

# Read Landsat Images

- `L1 = imread('LXX***###***###***##');`
- `L1= imread('LE71410552003047SGS00_B1.TIF')`

# Read Landsat images

# What's inside?

Screenshot of a software interface showing a data grid and plot selection tools.

The interface includes a top menu bar with PLOTS, VARIABLE, and VIEW tabs. Below the menu is a toolbar with icons for various plot types: plot, Plot as mult..., bar, area, pie, histogram, contour, surf, mesh, scatter, and plotyy. A status bar at the bottom shows "PLOTS: LE71410552003047SGS00\_B1(1,1)".

The main area displays a 7001x7821 uint8 matrix. The first few rows of the matrix are:
